

ZoomInfo - Home Assignment

It was a pleasure meeting you.

As discussed in the interview, below are the instructions for the home assignment.

Integrate with <https://catfact.ninja/> - cat facts api.

Create an angular application with node.js backend server that have the following:

1. Navigation should contain 2 tabs: 'All Facts' and 'My Facts' (all facts will display all facts, My facts are facts that the user can add to 'My Facts').
2. Display facts using carousel design pattern.
3. 'My Facts' will be a personal zone. data should be kept in the server (in memory).
4. Design should be responsive (working cross-browsers and mobile compatible).
5. Code should be submitted via github.
6. Git repository needs to contain README with first run instructions.
7. Thinking out of the box and creativity will be very appreciated.

Feel free to ask questions by mail - shahar.levi@zoominfo.com.

Good luck
